1 Fundamentals

Module name Science in Practice I					
Module Nr. 18-dg-2130	Credit Points 8 CP	Workload 240 h	Self study 180 h	Duration 1	Cycle offered WiSe/SoSe
Language German and English			Module owner Prof. Dr.-Ing. Herbert De Gersem		
1	Content Acquiring basic scientific skills based on concrete examples from the literature.				
2	Learning objectives / Learning Outcomes The students possess basic scientific skills. They are able to discover important literature for a given topic and to judge critically the corresponding content. They are familiar with numerical techniques, especially convergence studies relevant for praxis. The students are capable of analyzing errors within simulations and of judging accuracy requirements, e.g., with respect to errors in input data.				
3	Recommended prerequisite for participation Good understanding of electromagnetic fields, knowledge about numerical simulation methods.				
4	Form of examination Module Final Examination: <ul style="list-style-type: none"> Module Examination (Study Achievement, Oral Examination, Duration: 20 min, Standard Grading System) 				
5	Grading Module Final Examination: <ul style="list-style-type: none"> Module Examination (Study Achievement, Oral Examination, Weighting: 100 %) 				
6	Usability of this module MSc ETiT				
7	Grade bonus compliant to §25 (2)				
8	References Material related to the topic is provided.				
Courses					
	Course Nr. 18-dg-2130-pj	Course name Science in Practice I			
	Instructor Prof. Dr.-Ing. Herbert De Gersem			Type Project Seminar	SWS 4

Module name Science in Practice II					
Module Nr. 18-dg-2140	Credit Points 8 CP	Workload 240 h	Self study 180 h	Duration 1	Cycle offered WiSe/SoSe
Language German and English			Module owner Prof. Dr.-Ing. Herbert De Gersem		
1	Content Working on different scientific topics based on techniques acquired in Science in Practice I.				
2	Learning objectives / Learning Outcomes The students are capable of successfully working on new scientific topics from the numerical field simulation in a reasonable time. They are able to understand new methods, to implement them if necessary and to carry out simulations. Thereby methodologies discussed in Science in Practice I, especially concerning the solution of systems of equations, as well as convergence and error analysis are employed. They know how to document the results by means of a report and how to present them.				
3	Recommended prerequisite for participation Good understanding of electromagnetic fields, knowledge about numerical simulation methods.				
4	Form of examination Module Final Examination: <ul style="list-style-type: none"> Module Examination (Study Achievement, Oral Examination, Duration: 20 min, Standard Grading System) 				
5	Grading Module Final Examination: <ul style="list-style-type: none"> Module Examination (Study Achievement, Oral Examination, Weighting: 100 %) 				
6	Usability of this module MSc ETiT				
7	Grade bonus compliant to §25 (2)				
8	References Material related to the topic is provided.				
Courses					
	Course Nr. 18-dg-2140-pj	Course name Science in Practice II			
	Instructor Prof. Dr.-Ing. Herbert De Gersem			Type Project Seminar	SWS 4

Module name Functional Analysis					
Module Nr. 04-10-0036/de	Credit Points 9 CP	Workload 270 h	Self study 180 h	Duration 1	Cycle offered Every 2. Sem.
Language German			Module owner Prof. Dr. rer. nat. Reinhard Farwig		
1	Content Normed vector spaces, completion; Theorem of Hahn-Banach, Theorem of Banach-Steinhaus, Open Mapping Theorem, Closed Graph Theorem; Hilbert spaces; reflexive spaces, weak convergence; Sobolev spaces, weak solution of the Dirichlet problem; spectral properties of linear operators; compact operators on Banach spaces, spectral theorem for compact operators.				
2	Learning objectives / Learning Outcomes Students learn to - combine ideas from linear algebra, analysis and topology - understand and explain basic principles of functional analysis - explain methods from functional analysis in the context of partial differential equations				
3	Recommended prerequisite for participation recommended: Analysis, Integration Theory, Complex Analysis, Linear Algebra or comparable prerequisites acquired in mathematics courses in engineering programmes				
4	Form of examination Module Final Examination: <ul style="list-style-type: none"> • Module Examination (Study Achievement, Special Form, Pass/Fail Grading System) • Module Examination (Technical Examination, Optional, Standard Grading System) Fachprüfung: Usually the exam is taken in form of a written test, except when there are only a small number of potential participants. In this case, the exam can be taken in the form of an oral exam. The decision about the form of the exam is taken and communicated during the first two weeks of the lecture, based on the prospective number of students taking the exam. Studienleistung: Usually this means that the student successfully completes a certain proportion of the homework assignments. The precise proportion of necessary assignments and the marking scheme will be communicated by the instructor during the first lecture.				
5	Grading Module Final Examination: <ul style="list-style-type: none"> • Module Examination (Study Achievement, Special Form, Weighting: 0%) • Module Examination (Technical Examination, Optional, Weighting: 100%) 				
6	Usability of this module B.Sc. Mathematik, M.Sc Mathematik, M.Sc. Mathematics				
7	Grade bonus compliant to §25 (2)				
8	References Alt: Lineare Funktionalanalysis; Conway: A Course in Functional Analysis; Reed, Simon: Functional Analysis: Methods of Modern Mathematical Physics I; Rudin: Functional Analysis; Werner: Funktionalanalysis; Giarlet: Functional Analysis;

	Instructor Prof. Dr. rer. nat. Reinhard Farwig		Type Lecture & Practice	SWS 6

Module name Computational Electromagnetics and Applications II					
Module Nr. 18-dg-2010	Credit Points 3 CP	Workload 90 h	Self study 60 h	Duration 1	Cycle offered SoSe
Language English			Module owner Prof. Dr.-Ing. Herbert De Gersem		
1	Content <ul style="list-style-type: none"> Fundamentals of the Finite Element Method: weighted residuals, projection methods, variational formulations, weak formulations; Finite elements: definitions, classification, first order Whitney element complex, higher order elements; convergence and precision; Implementation details: data structures, matrix assembly, postprocessing of the solution; FEM application to electromagnetic problems: electrostatics, magnetostatics, stationary currents, quasistatics, wave propagation. 				
2	Learning objectives / Learning Outcomes Students will master the theoretical basics of finite element methods. They understand details regarding the implementation of the method for stationary and quasistationary fields. They can apply the finite element method in electrical engineering.				
3	Recommended prerequisite for participation Maxwell's equations, infinitesimal calculus, vector calculus. Basics of differential equations and linear algebra.				
4	Form of examination Module Final Examination: <ul style="list-style-type: none"> Module Examination (Technical Examination, Oral Examination, Duration: 30 min, Standard Grading System) 				
5	Grading Module Final Examination: <ul style="list-style-type: none"> Module Examination (Technical Examination, Oral Examination, Weighting: 100 %) 				
6	Usability of this module MSc ETiT				
7	Grade bonus compliant to §25 (2)

	Course Nr. 18-dg-2010-vl	Course name Computational Electromagnetics and Applications II		
	Instructor Prof. Dr. Irina Munteanu		Type Lecture	SWS 2

Module name Computational Electromagnetics and Applications III					
Module Nr. 18-dg-2020	Credit Points 3 CP	Workload 90 h	Self study 60 h	Duration 1	Cycle offered WiSe/SoSe
Language German and English			Module owner Prof. Dr.-Ing. Herbert De Gersem		
1	Content Finite Difference, Finite Volume and Finite Element Methods for the solution of Maxwell equations in the time domain. High order Discontinuous Galerkin methods. Stability and convergence analysis. High performance computing. Particle based simulations for beams and plasmas.				
2	Learning objectives / Learning Outcomes Students learn the theoretical basis of advanced simulation techniques for time dependent electromagnetic fields. Furthermore, the lecture mediates practical skills for the implementation, analysis and application of simulation codes for common problems of Electrical Engineering				
3	Recommended prerequisite for participation Maxwell's equations, infinitesimal calculus, vector calculus. Basics of differential equations and linear algebra				
4	Form of examination Module Final Examination: <ul style="list-style-type: none"> • Module Examination (Technical Examination, Oral Examination, Duration: 30 min, Standard Grading System) 				
5	Grading Module Final Examination: <ul style="list-style-type: none"> • Module Examination (Technical Examination, Oral Examination, Weighting: 100%) 				
6	Usability of this module MSc ETiT				
7	Grade bonus compliant to §25 (2)

	Instructor Privatdozent Dr. rer. nat. Erion Gjonaj			Type Lecture	SWS 2

Module name Relativistic Electrodynamics					
Module Nr. 18-kb-2020	Credit Points 5 CP	Workload 150 h	Self study 90 h	Duration 1	Cycle offered WiSe
Language German and English			Module owner Prof. Dr.-Ing. Harald Klingbeil		
1	Content Basics of tensor analysis (tensor fields, transformation behavior, invariance, Ricci calculus, covariant derivative, differential operators), Lorentz transform, fundamental relativistic effects (time dilation, length contraction, Doppler effect), covariant form of Maxwell's equations, induction law from relativistic point of view, relation to relativistic mechanics, four-vectors and four-tensors, electromagnetic energy-momentum tensor and Maxwell's stress tensor, applications of relativistic electrodynamics				
2	Learning objectives / Learning Outcomes The students understand the basic ideas of Special Relativity and are familiar with the scientific vocabulary. They are able to derive and interpret fundamental formulas, and they are familiar with the mathematical tools. The students understand the concept of covariance and a coordinate-free description of physical theories. They are able to quantitatively compute electromagnetic phenomena in the context of Special Relativity.				
3	Recommended prerequisite for participation Recommended: "Grundlagen der Elektrodynamik" (18-dg-1010)				
4	Form of examination Module Final Examination: <ul style="list-style-type: none"> Module Examination (Technical Examination, Oral Examination, Duration: 30 min, Standard Grading System) 				
5	Grading Module Final Examination: <ul style="list-style-type: none"> Module Examination (Technical Examination, Oral Examination, Weighting: 100%) 				
6	Usability of this module				
7	Grade bonus compliant to §25 (2)				
8	References Lecture slides are offered for download. Further references are given in the lecture.

2 Optional Modules

2.1 CED I: Accelerator Technology

Module name Accelerator Physics					
Module Nr. 18-bf-2010	Credit Points 3 CP	Workload 90 h	Self study 60 h	Duration 1	Cycle offered SoSe
Language German			Module owner Prof. Dr. Oliver Boine-Frankenheim		
1	Content Beam dynamics in linear- and circular accelerators, working principles of different accelerator types and of accelerator components, measurement of beam properties, high-intensity effects and beam current limits.				
2	Learning objectives / Learning Outcomes The students will learn the working principles of modern accelerators. The design of accelerator magnets and radio-frequency cavities will be discussed. The mathematical foundations of beam dynamics in linear and circular accelerators will be introduced. Finally the origin of beam current limitations will be explained.				
3	Recommended prerequisite for participation BSc in ETiT or Physics				
4	Form of examination Module Final Examination: <ul style="list-style-type: none"> Module Examination (Technical Examination, Oral Examination, Duration: 30 min, Standard Grading System) 				
5	Grading Module Final Examination: <ul style="list-style-type: none"> Module Examination (Technical Examination, Oral Examination, Weighting: 100%) 				
6	Usability of this module MSc ETiT, MSc Physics				
7	Grade bonus compliant to §25 (2)				
8	References Lecture notes, transparencies				
Courses					
	Course Nr. 18-bf-2010-vl	Course name Accelerator Physics			
	Instructor Prof. Dr. Oliver Boine-Frankenheim			Type Lecture	SWS 2

Module name Project Seminar Particle Accelerator Technology					
Module Nr. 18-kb-1020	Credit Points 9 CP	Workload 270 h	Self study 210 h	Duration 1	Cycle offered WiSe/SoSe
Language German and English			Module owner Prof. Dr.-Ing. Harald Klingbeil		
1	Content Work on a more complex project in the field of particle accelerator technology. Depending on the specific problem, measurement aspects, analytical aspects, and simulation aspects will be included.				
2	Learning objectives / Learning Outcomes Students will be able to solve complex engineering problems with different measurement techniques, analytical approaches or simulation methods. They are able to estimate measurement errors and modeling and simulation errors. They know how to present the results on a scientific level in talks and a paper. Students are able to organize teamwork.				
3	Recommended prerequisite for participation Good understanding of electromagnetic fields, broad knowledge of different electrical engineering disciplines.				
4	Form of examination Module Final Examination: <ul style="list-style-type: none"> Module Examination (Study Achievement, Oral Examination, Duration: 20 min, Standard Grading System) 				
5	Grading Module Final Examination: <ul style="list-style-type: none"> Module Examination (Study Achievement, Oral Examination, Weighting: 100 %) 				
6	Usability of this module BSc ETiT				
7	Grade bonus compliant to §25 (2)				
8	References Suitable material is provided based on specific problem.				
Courses					
	Course Nr. 18-kb-1020-pj	Course name Project Seminar Particle Accelerator Technology			
	Instructor Prof. Dr.-Ing. Harald Klingbeil			Type Project Seminar	SWS 4

Module name X-Ray Free Electron Lasers					
Module Nr.	Credit Points	Workload	Self study	Duration	Cycle offered
18-dg-2110	4 CP	120 h	75 h	1	SoSe
Language English			Module owner Prof. Dr.-Ing. Herbert De Gersem		
1	Content Optical lasers cannot produce x-rays of photons and high-gain free-electron lasers (FELs) are being developed as extremely bright sources of x-ray radiation. The peak brightness of these facilities exceeds that of other sources by more than ten orders of magnitude. FELs produce hard x-ray beams with very high transverse coherence and femtosecond pulse length. These characteristics open up new areas of x-ray science, such as femtosecond time-domain spectroscopy etc. In this course an overview of the basics of FEL physics is given. We start our discussion from basic principles of particle acceleration and synchrotron radiation, consider the electron motion in an undulator and explain the most important steps to derive the high-gain FEL model. The performance of the high-gain FEL in the linear and the non-linear regimes is considered. The self-amplified spontaneous emission (SASE) option is introduced and characterized. We discuss new schemes for enhancing of the FEL performance. The theoretical considerations in the course are partially illustrated by the results of numerical simulations and experiments. The numerical algorithms are shortly discussed.				
2	Learning objectives / Learning Outcomes The student should understand the basics of physics of free electron lasers.				
3	Recommended prerequisite for participation Maxwell's equations, integral and differential calculus, vector analysis				
4	Form of examination Module Final Examination: <ul style="list-style-type: none"> Module Examination (Technical Examination, Oral Examination, Duration: 30 min, Standard Grading System) 				
5	Grading Module Final Examination: <ul style="list-style-type: none"> Module Examination (Technical Examination, Oral Examination, Weighting: 100%) 				
6	Usability of this module MSc ETiT, MSc iST, MSc iCE, MSc Wi-ETiT				
7	Grade bonus compliant to §25 (2)				
8	References The foils of the lecture will be available at: http://www.desy.de/~zagor/lecturesFEL K. Wille, Physik der Teilchenbeschleuniger und Synchrotron- strahlungsquellen, Teuner Verlag, 1996. Module name Accelerator Physics and Technology					
Module Nr. 18-dg-2070	Credit Points 6 CP	Workload 180 h	Self study 165 h	Duration 1	Cycle offered WiSe/SoSe
Language German and English			Module owner Prof. Dr.-Ing. Herbert De Gersem		
1	Content Learn and understand the theoretical contexts in the field of accelerator physics; application of the theoretical background to practical examples related to current projects in the field.				
2	Learning objectives / Learning Outcomes The seminar addresses various topics relevant to accelerator physics and technology which in detail depend on the guest lecturers. So, insight into the current developments as well as into the different projects in the area is given. Moreover, the focus is put on the practical challenges arising during the design, construction and commissioning phase of the particular accelerator projects.				
3	Recommended prerequisite for participation Basic knowledge in the field of accelerator physics and technology is useful, though not mandatory.				
4	Form of examination Module Final Examination: <ul style="list-style-type: none"> • Module Examination (Study Achievement, Oral Examination, Duration: 30 min, Standard Grading System) 				
5	Grading Module Final Examination: <ul style="list-style-type: none"> • Module Examination (Study Achievement, Oral Examination, Weighting: 100 %) 				
6	Usability of this module MSc ETiT				
7	Grade bonus compliant to §25 (2)

Courses					
	Course Nr. 18-dg-2070-se	Course name Accelerator Physics and Technology			
	Instructor Prof. Dr.-Ing. Herbert De Gersem, Prof. Dr. rer. nat. Norbert Pietralla			Type Seminar	SWS 1

Module name Simulation of beam dynamics and electromagnetic fields in accelerators					
Module Nr. 18-dg-2170	Credit Points 3 CP	Workload 90 h	Self study 60 h	Duration 1	Cycle offered SoSe
Language German and English			Module owner Prof. Dr.-Ing. Herbert De Gersem		
1	Content Particle tracking methods: types of particle methods, relationship to Vlasov model – Integration of equations of motion: Boris pusher, numerical stability, symplecticity – Electrostatic PIC: Green functions, FFT and FD methods, charge deposition, field interpolation, spline shape functions – DC-gun simulation: space charge limited emission – Tracking in the Lorenz frame – Map based tracking methods – Electromagnetic PIC: FDTD method, charge-conserving current deposition, Boris scheme, low dispersion methods – Wakefields and impedances: simulation of ultra-relativistic beams – Plasma Wakefield Acceleration – Parallel computing				
2	Learning objectives / Learning Outcomes The lecture gives an overview on the numerical modeling of charged particle beams and electromagnetic fields in accelerators. Emphasis is given to the simulation of collective effects caused by space-charge and electromagnetic wakefields. The lecture targets master students focusing on different disciplines of electrical engineering and physics. These include the theory of electromagnetic fields, computational engineering as well as computational and experimental accelerator physics. The level is sufficient to provide a solid foundation for contemporary simulation methods for particle beams in accelerators. Furthermore, for experimental accelerator physicists, the lecture provides insight into the different simulation tools, their application, their advantages and also their pitfalls and ranges of validity. During the course, practical simulation examples referring to actual problems at DESY, GSI and the S-DALINAC will be presented.				
3	Recommended prerequisite for participation				
4	Form of examination Module Final Examination: <ul style="list-style-type: none"> • Module Examination (Technical Examination, Oral Examination, Duration: 30 min, Standard Grading System) 				
5	Grading Module Final Examination: <ul style="list-style-type: none"> • Module Examination (Technical Examination, Oral Examination, Weighting: 100%)

Module name Applied Superconductivity					
Module Nr.	Credit Points	Workload	Self study	Duration	Cycle offered
18-bf-2030	3 CP	90 h	60 h	1	SoSe
Language German and English			Module owner Prof. Dr. Oliver Boine-Frankenheim		
1	Content <ul style="list-style-type: none"> • Basics of electrical conductivity at DC and RF • Kamerligh-Onnes experiment, Meissner effect • Superconductor state diagram • London equations, Typ I / II Superconductor • Cooper pairs (briefly: BCS theory, GL theory) • Flux quantization, Flux vortices • AC superconductivity, two fluid model, RF cavities • Cooper pair tunneling, Josephson junctions • Metrology: SQUIDs, (quantum-) Hall effect • Superconductor magnetization, Hysteresis, Bean's model • Applications: Magnets in accelerator and medical technology, precision field and current measurements, energy engineering 				
2	Learning objectives / Learning Outcomes The students obtain a phenomenological understanding of superconductivity, which enables them to apply superconductors in engineering practice. Starting from Maxwellian electrodynamics, superconductors are introduced as perfect conductors at zero frequency. Both their DC and AC properties are discussed. Theory shall be reduced as much as possible. Quantum mechanics is not a requirement for the course, however, simplified quantum mechanical models will be introduced. The focus of the lecture is put on applications, e.g. magnet technology or precision metrology.				
3	Recommended prerequisite for participation Electrodynamics (Maxwell's equations)				
4	Form of examination Module Final Examination: <ul style="list-style-type: none"> • Module Examination (Technical Examination, Oral Examination, Duration: 30 min, Standard Grading System) 				
5	Grading Module Final Examination: <ul style="list-style-type: none"> • Module Examination (Technical Examination, Oral Examination, Weighting: 100%)

	Course Nr. 04-00-0172-vu	Course name Numerical Analysis of Elliptic Equations			
	Instructor			Type Lecture & Prac- tice	SWS 6

Module name Numerical Methods for Ordinary Differential Equations for Engineers					
Module Nr. 04-10-0042/de	Credit Points 5 CP	Workload 150 h	Self study 105 h	Duration 1	Cycle offered Every 2. Sem.
Language German			Module owner Prof. Dr. techn. Herbert Egger		
1	Content initial value problems: one-step methods, multi-step methods; convergence analysis, notions of stability; boundary-value problems: Shooting methods, finite difference methods, stability and convergence;				
2	Learning objectives / Learning Outcomes Students know the basic numerical solution concepts for ordinary differential equations and they are able to analyze, compare, and apply them.				
3	Recommended prerequisite for participation recommended: Analysis, Linear Algebra, Ordinary Differential Equations, Introduction to Numerical Analysis or similar knowledge as taught in an engineering programme.				
4	Form of examination Module Final Examination: <ul style="list-style-type: none"> • Module Examination (Technical Examination, Technical Examination, Standard Grading System) • Module Examination (Study Achievement, Special Form, Pass/Fail Grading System) Fachprüfung: Usually the exam is taken in form of a written test, except when there are only a small number of potential participants. In this case, the exam can be taken in the form of an oral exam. The decision about the form of the exam is taken and communicated during the first two weeks of the lecture, based on the prospective number of students taking the exam. Studienleistung: Usually this means that the student successfully completes a certain proportion of the homework assignments. The precise proportion of necessary assignments and the marking scheme will be communicated by the instructor during the first lecture.				
5	Grading Module Final Examination: <ul style="list-style-type: none"> • Module Examination (Technical Examination, Technical Examination, Weighting: 100 %) • Module Examination (Study Achievement, Special Form, Weighting: 0 %) 				
6	Usability of this module B.Sc. Mathematik, M.Sc Mathematik, M.Sc. Mathematics				
7	Grade bonus compliant to §25 (2)				
8	References Deuffhard, Bornemann: Numerische Mathematik 2 Stoer, Bulirsch: Numerische Mathematik 2

Module name Numerical Linear Algebra					
Module Nr. 04-10-0043/de	Credit Points 5 CP	Workload 150 h	Self study 105 h	Duration 1	Cycle offered Every 2. Sem.
Language German			Module owner Dr. rer. nat. Alf Gerisch		
1	Content Systems of linear equations: iterative methods, singular value decomposition, eigenvalue problems.				
2	Learning objectives / Learning Outcomes Students know about the most important numerical methods of linear algebra and they are able to explain, classify, and apply them.				
3	Recommended prerequisite for participation recommended: Linear Algebra, Introduction to Numerical Analysis or similar knowledge				
4	Form of examination Module Final Examination: <ul style="list-style-type: none"> • Module Examination (Technical Examination, Technical Examination, Standard Grading System) • Module Examination (Study Achievement, Special Form, Pass/Fail Grading System) Fachprüfung: Usually the exam is taken in form of a written test, except when there are only a small number of potential participants. Module name Partial Differential Equations I					
Module Nr. 04-10-0037	Credit Points 9 CP	Workload 270 h	Self study 180 h	Duration 1	Cycle offered Every 2. Sem.
Language German and English			Module owner Prof. Dr. rer. nat. Matthias Hieber		
1	Content Classical treatment of the fundamental types (e.g. elliptic, parabolic, hyperbolic, dispersive), formulation of elliptic boundary value problems as variational problems, regularity theory, theory of Sobolev spaces, Galerkin methods, fixed point methods and nonlinear elliptic and parabolic equations				
2	Learning objectives / Learning Outcomes Students - understand and are able to apply the notions, methods and results treated in the course - develop an advanced level of understanding of partial differential equations - are able to extend their knowledge in this field				
3	Recommended prerequisite for participation recommended: Functional Analysis				
4	Form of examination Module Final Examination: <ul style="list-style-type: none"> Module Examination (Technical Examination, Optional, Standard Grading System) Fachprüfung: Usually the exam is taken in form of a written test, except when there are only a small number of potential participants. In this case, the exam can be taken in the form of an oral exam. The decision about the form of the exam is taken and communicated during the first two weeks of the lecture, based on the prospective number of students taking the exam.				
5	Grading Module Final Examination: <ul style="list-style-type: none"> Module Examination (Technical Examination, Optional, Weighting: 100%)

Module name Simulation of beam dynamics and electromagnetic fields in accelerators					
Module Nr. 18-dg-2170	Credit Points 3 CP	Workload 90 h	Self study 60 h	Duration 1	Cycle offered SoSe
Language German and English			Module owner Prof. Dr.-Ing. Herbert De Gersem		
1	Content Particle tracking methods: types of particle methods, relationship to Vlasov model – Integration of equations of motion: Boris pusher, numerical stability, symplecticity – Electrostatic PIC: Green functions, FFT and FD methods, charge deposition, field interpolation, spline shape functions – DC-gun simulation: space charge limited emission – Tracking in the Lorenz frame – Map based tracking methods – Electromagnetic PIC: FDTD method, charge-conserving current deposition, Boris scheme, low dispersion methods – Wakefields and impedances: simulation of ultra-relativistic beams – Plasma Wakefield Acceleration – Parallel computing				
2	Learning objectives / Learning Outcomes The lecture gives an overview on the numerical modeling of charged particle beams and electromagnetic fields in accelerators. Emphasis is given to the simulation of collective effects caused by space-charge and electromagnetic wakefields. The lecture targets master students focusing on different disciplines of electrical engineering and physics. These include the theory of electromagnetic fields, computational engineering as well as computational and experimental accelerator physics. The level is sufficient to provide a solid foundation for contemporary simulation methods for particle beams in accelerators. Furthermore, for experimental accelerator physicists, the lecture provides insight into the different simulation tools, their application, their advantages and also their pitfalls and ranges of validity. During the course, practical simulation examples referring to actual problems at DESY, GSI and the S-DALINAC will be presented.				
3	Recommended prerequisite for participation				
4	Form of examination Module Final Examination: <ul style="list-style-type: none"> Module Examination (Technical Examination, Oral Examination, Duration: 30 min, Standard Grading System) 				
5	Grading Module Final Examination: <ul style="list-style-type: none"> Module Examination (Technical Examination, Oral Examination, Weighting: 100%) 				
6	Usability of this module MSc ETiT, MSc Physik				
7	Grade bonus compliant to §25 (2)

Module name Electromagnetics and Differential Forms					
Module Nr.	Credit Points	Workload	Self study	Duration	Cycle offered
18-dg-2030	3 CP	90 h	60 h	1	SoSe
Language English			Module owner Prof. Dr.-Ing. Herbert De Gersem		
1	Content In the recent years, the amount of literature that deals with physical models in terms of differential forms (DF) has increased strongly. For instance, DF allow a clear and elegant representation of electromagnetics (EM). The operators grad, curl, and div of vector analysis are replaced by a single operator of the exterior derivative. Similarly, the integral theorems of Gauss and Stokes are replaced by a single integral theorem. Vector analysis is limited to three dimensions, while DF can be applied to any dimensions. This is useful for the relativistic formulations in four dimensions. Since DF can be canonically integrated over appropriate domains they lend themselves naturally to discretizations of the finite integration type. This lecture series provides an introduction into DF calculus, and its relation to vector analysis. Maxwell's equations and the constitutive relations are expressed in terms of DF, and the main steps into discretization are outlined briefly.				
2	Learning objectives / Learning Outcomes Students will acquire a detailed understanding of how to describe EM in terms of DF *How "space" (and "time") can be modelled by differentiable manifolds; *How a class of physical fields can be represented by differential forms; *How Maxwell's equations and constitutive relations translate into the language of DF; *How this continuous representation can be discretized.				
3	Recommended prerequisite for participation It is recommended that the students have basic knowledge about *Electromagnetics (Maxwell's equations in differential and integral form; constitutive relations; EM potentials); *Vector analysis (scalar and vector fields; differential operators grad, curl, and div; integral theorems of Gauss and Stokes).				
4	Form of examination Module Final Examination: <ul style="list-style-type: none"> Module Examination (Technical Examination, Oral Examination, Duration: 30 min, Standard Grading System) Module final exam: oral examination, details will be fixed in the first lecture				
5	Grading Module Final Examination: <ul style="list-style-type: none"> Module Examination (Technical Examination, Oral Examination, Weighting: 100%) 				
6	Usability of this module M.Sc. CE; M.Sc. etit, particularly major in CED; M.Sc. Mechatronics

Module name Matrix Analysis and Computations					
Module Nr. 18-pe-2070	Credit Points 6 CP	Workload 180 h	Self study 120 h	Duration 1	Cycle offered SoSe
Language English			Module owner Prof. Dr.-Ing. Marius Pesavento		
1	Content This graduate course is a foundation class on matrix analysis and computations, which are widely used in many different fields, e.g., machine learning, computer vision, systems and control, signal and image processing, communications, networks, optimization, and many more. . . Apart from the theory this course will also cover the design of efficient algorithm and it considers many different examples from the aforementioned fields including examples from social media and big data analysis, image processing and medical imaging, communication network optimization, and written text classification. Specific topics: (i) basic matrix concepts, subspace, norms, (ii) linear least squares (iii) eigendecomposition, singular value decomposition, positive semidefinite matrices, (iv) linear system of equations, LU decomposition, Cholesky decomposition (v) pseudo-inverse, QR decomposition (vi) advanced tensor decomposition, advanced matrix calculus, compressive sensing, structured matrix factorization				
2	Learning objectives / Learning Outcomes Students will learn matrix analysis and computations at an advanced or research level.				
3	Recommended prerequisite for participation Basic knowledge in linear algebra.				
4	Form of examination Module Final Examination: <ul style="list-style-type: none"> • Module Examination (Technical Examination, Optional, Standard Grading System)
